

ABSTRACT OF THE DISCLOSURE

The combination money clip and card holder comprises a one-piece element having a rectangular base with two inwardly-oriented L-shaped brackets formed along longitudinal edges thereof. The rectangular base also contains a stop, formed on one of the transverse edges thereof. Together with the rectangular base, the L-shaped brackets comprise a channel for receiving flexible cards, such as credit cards, whereas the stop prevents the cards from being inserted too far into the channel. The edges of the base supporting the L-shaped brackets are tapered in the direction of the stop to provide means for removably capturing the cards inserted into the channel. The holder also includes a resilient money clip formed on the opposite side of the base. The money clip is formed so that it is biased toward the base, thus allowing bank notes inserted between the clip and the base to be removably retained therein.
